Our Services

Pain Management, also known as **pain medicine**, draws on many disciplines in science and the healing arts to systematically study pain, its prevention, evaluation, diagnosis and treatment, as well as the rehabilitation of painful disorders.

Physiatrists, or rehabilitation physicians, are nerve, muscle, and bone experts who treat injuries or illnesses that affect how you move. **Rehabilitation physicians** are medical doctors who have completed training in the medical specialty of physical medicine and rehabilitation (**PM&R**).

Chiropractic doctors focus on disorders of the musculoskeletal system and the nervous system, and the effects of these disorders on general health and wellness. Chiropractors practice a drug-free, hands-on approach to health care that includes patient examination, diagnosis, and personalized treatment plans.

Physical Therapists use exercise, manual (hands on) therapy and other modalities to treat a variety of conditions to restore a patient's function and reduce or eliminate pain.

A **Neurosurgeon** is a physician who specializes in the diagnosis and surgical treatment of disorders of the central and peripheral nervous system including congenital anomalies, trauma, tumors, vascular disorders, infections of the brain or spine, stroke, or degenerative diseases of the spine. The education and training to become a neurosurgeon is rigorous and extensive and includes the completion of:

- Four years of pre-medical education at a college or university
- Four years of medical school resulting in an M.D. or D.O. degree
- One year internship in general surgery
- Five to seven years in a neurosurgery residency program
- Some neurosurgeons complete a fellowship after residency to specialize in a particular area
- Continuing education — annual meetings, conferences, scientific journals, research — to keep up with advances made in the complex field of neurosurgery

*Did you know that our **Chiropractic Doctors** are adjunct clinical instructors at the NY Chiropractic College and are frequent guest lecturers for many organizations?*

*Our **Neurosurgeons** and **Physician Assistants** also mentor medical students in training, giving back to our community. Our Neurosurgeons are guest lecturers both locally and across the globe.*
